FOREST FACTS

Valley Box's wood vendors all adhere to SFI & FSC certifications

The forest products industry, which comprises about 15 percent of forestland ownership, is responsible for 41 percent of all replanted forest acreage.

Growing trees
harness the energy
of the sun and remove
carbon dioxide from
the atmosphere.

Demand for wood products keeps our forests growing; it does not eliminate them.

Harvesting mature forests allows new, young forests with a rapid rate of carbon absorption to take their places, continuing the naturally perfected cycle.

The U.S. forest resource has grown by 39% since 1953.

Tree growth exceeds harvests in all areas of the U.S.

The forest products industry plants more than 1 billion trees a year, or about 3 million trees planted every day.

One third of the U.S. (749 million acres) is forestland.

4.6 million trees are planted every day in the U.S.

When a young forest is growing, it produces 1.07 tons of oxygen and absorbs 1.47 tons of carbon dioxide for every ton of wood.
