

Valley Box Company provides you with the right tools to optimize your shipping process and increase your service capabilities, all while increasing efficiency and cutting costs.

Triple Wall Box

CHALLENGE

A Composite Materials Manufacturer needed to reduce their shipping costs in order to be more competitive on a military contract bid. After negotiating with their freight carrier it was suggested they attempt to reduce the total packaged weight in order to achieve shipping savings.

BENEFITS

- 80% Reduction in weight
- 28% Reduced shipping & freight cost
- Lead time on shipping container was reduced from 5 to 3 days
- Holds up to 500 lbs.

SOLUTION

Valley Box Company suggested a commercial strength triple wall box. A triple fluted corrugated materials whose strength is comparable to plywood. By incorporating a wood base for the heavier products the new box design was capable of supporting the product's load. The use of triple wall successfully reduced the overall shipping by 80% which in turn reduced shipping cost by 28%.

TESTIMONIAL

“You guys did such an amazing job finding the perfect solution and reduced costs significantly.”
