

Valley Box Company provides you with the right tools to optimize your shipping process and increase your service capabilities, all while increasing efficiency and cutting costs.

Case Study: Motorcycle Pack

CHALLENGE

A San Diego Serviceman, learning of his 3 year deployment, needed to ship his motorcycle to his new residence in Europe. He wanted to drop off the bike and have it professionally packaged and shipped with limited involvement. His main concern was possible damage to the custom chrome, painted artwork and that the motorcycle remain in running condition.

BENEFITS

- Fast handling of cargo for freight forwarder
- Motorcycle shocks remained primed
- No disassembly of motorcycle required
- Ready to drive upon delivery
- Tip-n-tell revealed if mishandling occurred

SOLUTION

The Valley Box packing crew decided to secure the motorcycle using minimal attachments, to prevent possible abrasion damage. Tie downs were used to secure the bike to the plywood deck, preventing vertical, and lateral movement. Due to the substantial width of the rear tire a cradle was utilized. Banding was used for added strength and security along with tip-n-tell labels to indicate any rough handling by the shipper.

TESTIMONIAL

“ My bike arrived safe & sound, thank you for your attention to detail.

Lieutenant Commander - Armed Forces Stationed in Germany”

LAMINATED PLYWOOD SUPPORTED WEIGHT

CRADLE PREVENTED LATERAL MOVEMENT

EASY TO HANDLE CONTAINER

MINIMAL ATTACHMENTS POINTS
